

Big Dutchman®

Free-access stall **BD**

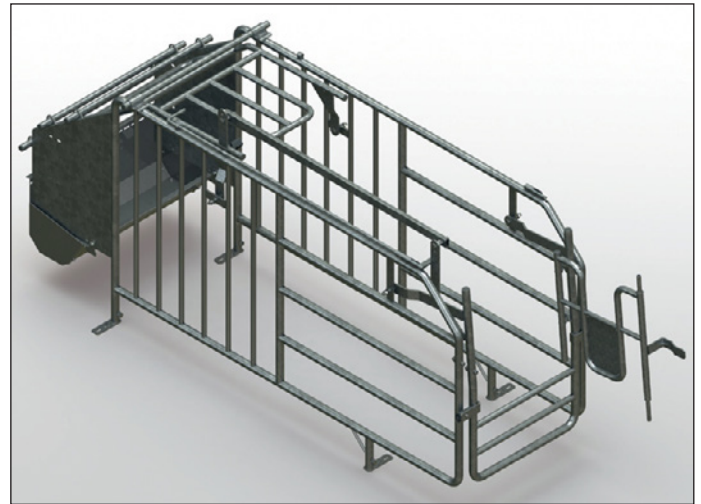

For use in insemination and waiting areas

Free-access stall **BD**

Animal-friendly housing for the sows and optimal working conditions

Features:

- Simple rocking mechanism
- Integrated insemination door for easy insemination and pregnancy checking
- The open design of the stall provides a good overview for the farm staff
- Individual locking device can be operated at the front or at the back of the stall
- Group locking function (optional)
- The vertical arrangement of the bars in the front part of the stall reduces the danger of sows turning inside the stall
- Rubber noise absorbers for quiet opening and closing of the stall reduces noise levels
- Available in two different stall widths: 25.6" and 27.5" (650 and 700 mm) interior width

Insemination door open – provides access to the sow

Free-access stall BD closed – the sow has access to the feed trough

Free-access stall BD open – the sow can walk into and close the stall by herself

The free-access stall developed by Big Dutchman provides animal-friendly housing for the sows and optimal working conditions for the farm staff. It can be used in the service center and in waiting areas.

When a sow enters the open stall, the door locks behind her and she can eat without being disturbed or simply use the stall as individual retreat. The stall cannot accidentally be opened from the outside by other sows. The sow can release the lock by pushing back against the integrated insemination door and leave the stall at her own will.
